

# Rotary Afeka Avivtek Israeli technology Newsletter

February 2022

Rotary Afeka Avivtek is a unique Rotary club as all its members are executives in the Hi-Tech industry.. In this newsletter we are pleased to share with you information about 4 Israeli startups in various markets. You are welcome to [contact](#) us for any further inquiries about the below mentioned companies including details of their management at <https://www.avivtek.com/contact-en>

## 3D Scanning of construction area

**iMeasure** is developing a revolutionary accurate camera and lidar-based 3D scanner mounted on a builder's hat. That will scan a space quickly, easily, and accurately enabling the user to immediately use applications that will make his work more accurate and efficient.

The data is viewed through a Mixed Reality visor that enables the worker to see digital data on top of the physical reality on the building site. The worker can also send and receive required data from the helmet.

## Cosmetic Factory in a Capsule

**Capsulab – A Factory in a Capsule.**

Capsulab Technology is answering the growing consumer demand for fresh, personalized and natural products - how they want it and when they want it.

With its **Factory in a Capsule technology**, Consumer Packaged Group (CPG) brands can become the "Nespresso" of their category, on-demand at home.

Thus enabling:

- Personalization - products are customized to the consumer's personal needs on the spot.
- Active Ingredients – potency can be maintained longer as the materials are preserved in vacuumed isolation until manufacturing.

In addition, this enables improving ingredients performance.

- Natural & Clean - as the product is manufactured at the point of use, the brand can minimize the use of stabilizing agents.
